The shared-use line comes with optional features, functions and accessories to accommodate specific application needs

ADA User Key: The manager bypass key makes it easy for facilities managers to administer any number advanced security shared-use locks, and works alongside the programming and ADA user key to provide complete control over the lock's functionality.

Manager Bypass Key: The manager bypass key makes it easy for facilities managers to administer any number advanced security shared-use locks, and works alongside the programming and ADA user key to provide complete control over the lock's functionality.

Programming Key: In addition to its role in lock auditing, the programming key also enables managers to register user and manager keys to a lock. The keys are registered automatically by touching the programming key to the lock followed by the user or manager key(s). The programming key also serves as the interface with the Audit Trail Kit programming box.
